Portfolio

Mumbai, India · Open to relocation (Germany, Ireland, UAE) or remote · Former EU Blue Card holder (Berlin 2021–22) · Available now

PROFILE

Frontend architect with 18+ years building enterprise web products and 7+ years leading architecture across multiple SaaS products. Most recently I architected **SOP Co-Pilot**, an in-app AI agent for a product-content platform with 20+ enterprise customers and ~10M SKUs. It works plan-first and approval-gated, and every run is audited and checked by evals.

SKILLS

Frontend	Angular (12 to 21), TypeScript, RxJS, Angular Material, AG Grid Enterprise, service workers, i18n, React
AI & agents	planners, tool and policy enforcement, approval gating, RAG, evals, streaming UX, LLM routing (OpenAI, Anthropic), MCP
Platform	NestJS, Node.js, Python, Java, PySpark, Docker, Kubernetes, AWS, CI/CD

EXPERIENCE

Bluemeteor (formerly Codifyd) – Remote for US company

Frontend Architect (Contract), Sep 2022 – Oct 2026 · AI product-content platform (PIM/PXM/DAM)

- Led **SOP Co-Pilot** end to end, both the Angular client and the NestJS service. It answers with citations and runs multi-step workflows only after the user approves.
- Chose a **plan-first agent design**: a deterministic action catalog, separate read and write risk classes, re-planning on failure, and an audit ledger per run.
- Built the **eval harness and release gates**; it rolled out as an enterprise pilot behind feature flags.
- Led **AI-assisted mapping** across the supplier and retailer apps, replacing field-by-field manual mapping with suggestions, review and bulk accept.
- Owned AG Grid Enterprise data screens and multi-environment CDN release pipelines.
- Removed a **multi-minute UI freeze** by scoping ~551 lookup calls down to the 40 visible rows.

Forto GmbH – Berlin, Germany

Senior Frontend Engineer, Sep 2021 – Sep 2022 · Digital freight forwarding

- Relocated to Berlin on a permanent contract. Built logistics dashboards, shipment visibility, exception handling and role-based workflows.

Codifyd – Mumbai, India

Team Lead, 2018 – 2021 · Product information management

- Led 7 developers and owned frontend architecture across the retailer PIM, the supplier portal and BridgeWeb.
- Defined module boundaries for large Angular apps, set integration contracts, and ran release coordination with DevOps.

Zooty.in, Musafir.com, Verdantis, Capgemini, E10 InfoTech, Aambit Softwares

Earlier roles, 2012 – 2018

- Progressed from developer to frontend lead, working on high-traffic travel booking, customer-facing products and data-dense enterprise workflows.

OPEN SOURCE

- **ngx-copilot-platform:** Angular copilot SDK with a Next.js RAG backend on Supabase pgvector
- **org-ai-force:** Angular 21 AI agent workspace with a NestJS orchestrator, RAG and MCP tools
- **agent-studio:** visual builder for AI agents with MCP tools and provider abstraction

EDUCATION

- B.E. Computer Science · Atharva College of Engineering, Mumbai · 2013
