

Ankit Parekh

AI Frontend Architect | Enterprise Angular Architect | Copilot and LLM App Engineer

Mumbai, India | Immediate joiner | Open to Germany, Ireland, and remote Europe roles | ankit77parekh@gmail.com | +91 9920353532 | GitHub: github.com/AnkitParekh007 | LinkedIn: in.linkedin.com/in/akkiparekh | Portfolio: ankitparekh007.github.io/resume/

PROFESSIONAL SUMMARY

AI Frontend Architect with 18+ years of experience building enterprise web products, large Angular and TypeScript applications, and intelligent UI systems. Focused on AI-native frontend architecture: embedded copilots, RAG-powered interfaces, multi-agent workflows, tool execution, streaming UX, and UI-aware assistants that operate inside real product workflows.

CORE STRENGTHS

- Architect large Angular and TypeScript applications with clear module boundaries, reusable UI patterns, and long-term ownership.
- Design AI copilots that understand product context, answer from documentation and workflows, and execute actions through APIs and navigation.
- Translate complex enterprise workflows into usable product experiences across dense forms, tables, dashboards, and operational UI.
- Lead delivery across frontend, product, DevOps, and platform teams with production sustainment discipline.

TECHNICAL SKILLS

Frontend	Angular, TypeScript, RxJS, JavaScript, HTML5, CSS3, Sass, React, UI architecture
AI / LLM	Copilots, AI agents, RAG, LLM integrations, prompt flows, tool calling, streaming UX, guardrails
Architecture	Enterprise frontend platforms, modular systems, component boundaries, design systems, state ownership
Backend / Cloud	Node.js, Express.js, Python, AWS, Docker, Kubernetes, Jenkins, CI/CD
Product UX	Wireframes, interaction flows, usability-led iteration, data-heavy workflows, stakeholder alignment

AI FRONTEND WORK

Embedded copilot for enterprise apps

- Product-grade copilot concept for Angular and web apps that understands routes, selected records, forms, DOM context, and user intent.
- Supports multi-agent modes for plan, execute, debug, and ask workflows.
- Uses RAG across docs, codebase knowledge, APIs, and workflows to ground responses in product context.
- Executes actions through APIs, navigation, workflow tools, evaluation loops, retries, and recovery paths.

Copilot runtime and SDK direction

- Reusable architecture for a copilot shell, agent orchestrator, tool registry, ingestion connectors, and enterprise-safe action execution.
- Designed for teams that want AI-native behavior inside Angular and TypeScript products without one-off integrations.

PROFESSIONAL EXPERIENCE

Team Lead - Codifyd | 2018 - Present

- Own technical direction for enterprise web products, including stack fit, integration contracts, frontend architecture, and delivery trade-offs.
- Define system boundaries for large multi-module web applications and sustain production codebases through refactors, regression control, and release coordination.
- Create wireframes, interaction flows, and reusable UI patterns to align product intent with engineering constraints.
- Partner with DevOps and platform teams on CI/CD, build tooling, environment-specific defects, and cross-stack troubleshooting.
- Lead UX engineering for data-heavy product platforms with forms, tables, workflows, validation, consistency, and long-running operational flows.

Front-end Expert - Zooty.in | 2016 - 2018

- Steered frontend implementation strategy, dependencies, sequencing, and UI architecture for customer-facing web products.
- Designed component boundaries, state ownership, interaction flows, and maintainable UI structure.
- Owned UX outcomes, defect triage, performance hotspots, and incremental hardening of live systems.

Lead Front-end Programmer - Musafir.com | 2015 - 2016

- Implemented and reviewed production UI for high-traffic travel workflows including search, pricing, booking, and checkout surfaces.
- Resolved complex rendering, layout, and performance issues under real traffic and data-load conditions.
- Partnered with product and clients on acceptance criteria, demos, technical feasibility, and UI-heavy feature delivery.

Senior Front-end Developer - Verdantis Pvt Ltd. | 2014 - 2015

- Built data-dense enterprise interfaces with strict validation, forms, tables, and workflow requirements.
- Supported Scrum delivery, browser regression fixes, API/schema-linked UI defects, UAT cycles, and production RCA.

Freelance Usability Consultant / Web Developer - Capgemini, Efurtherance, E10 InfoTech, Aambit Softwares | 2012 - 2014

- Delivered frontend modules, layouts, mockups, client checkpoints, bug fixes, and integration support across early-stage client projects.

PRODUCTION DOMAINS

- Travel technology: search, pricing, booking, checkout, high-traffic consumer flows.
- Product data platforms: catalogs, governance workflows, data-heavy forms, bulk actions, and analyst operations.
- Logistics and operations systems: dashboards, shipment visibility, exceptions, role-based workflows, and customer surfaces.

EDUCATION

- Bachelor of Engineering in Computer Science - Atharva College of Engineering, Mumbai
- Higher Secondary Education - Royal College of Arts & Science, Mumbai
