SKILLS

ROLE TARGETS

AI Frontend Engineer
Frontend Architect
Angular Architect
Copilot / LLM App Engineer

Profile

AI Frontend Architect with 18+ years of experience shipping enterprise web products, large Angular and TypeScript applications, and intelligent UI systems. I build AI-native frontend experiences where copilots, RAG, tool execution, and agentic workflows live inside real applications, not beside them.

- Architect large Angular platforms with clear module boundaries, reusable UI patterns, and long-term ownership.
- Design embedded copilots that understand product context, retrieve grounded answers, and execute workflow actions.
- Turn complex enterprise workflows into usable interfaces across dense forms, tables, dashboards, and operational UI.
- Lead delivery across product, frontend, DevOps, and platform teams with production sustainment discipline.

AI Frontend Work

Embedded Copilot for Enterprise Apps

- Copilot concept for Angular and web apps that understands routes, selected records, forms, DOM context, and user intent.
- Multi-agent modes for plan, execute, debug, and ask workflows.
- RAG across docs, codebase knowledge, APIs, and workflows to ground responses in product context.
- Action execution through APIs, navigation, workflow tools, evaluation loops, retries, and recovery paths.

Copilot Runtime and SDK Direction

- Reusable architecture for a copilot shell, agent orchestrator, tool registry, ingestion connectors, and enterprise-safe action execution.
- Designed for teams that want AI-native behavior inside Angular and TypeScript products without one-off integrations.

Employment History

Team Lead, Codifyd

2018 - PRESENT

- Own technical direction for enterprise web products, including stack fit, integration contracts, frontend architecture, and delivery trade-offs.
- Define system boundaries for large multi-module web applications and sustain production codebases through refactors, regression control, and release coordination.
- Create wireframes, interaction flows, and reusable UI patterns to align product intent with engineering constraints.
- Partner with DevOps and platform teams on CI/CD, build tooling, environment-specific defects, and cross-stack troubleshooting.

Front-end Expert, Zooty.in

2016 - 2018

- Steered frontend implementation strategy, dependencies, sequencing, and UI architecture for customer-facing web products.
- Designed component boundaries, state ownership, interaction flows, and maintainable UI structure.
- Owned UX outcomes, defect triage, performance hotspots, and incremental hardening of live systems.

Lead Front-end Programmer, Musafir.com

2015 - 2016

- Implemented and reviewed production UI for high-traffic travel workflows including search, pricing, booking, and checkout surfaces.
- Resolved complex rendering, layout, and performance issues under real traffic and data-load conditions.

Senior Front-end Developer, Verdantis Pvt Ltd.

2014 - 2015

- Built data-dense enterprise interfaces with strict validation, forms, tables, and workflow requirements.
- Supported Scrum delivery, browser regression fixes, API/schema-linked UI defects, UAT cycles, and production RCA.

Frontend / Web Consultant, Capgemini, Efurtherance, E10 InfoTech, Aambit Softwares

2012 - 2014

SKILLS

ROLE TARGETS

AI Frontend Engineer
Frontend Architect
Angular Architect
Copilot / LLM App Engineer

- Delivered frontend modules, layouts, mockups, client checkpoints, bug fixes, and integration support across early client projects.

Technical Capabilities

Frontend	Angular, TypeScript, RxJS, JavaScript, HTML5, CSS3, Sass, React
AI / LLM	Copilots, RAG, AI agents, tool calling, streaming UX, prompt flows, guardrails
Architecture	Enterprise UI platforms, modular systems, design systems, state ownership
Cloud	AWS, Docker, Kubernetes, Jenkins, CI/CD
Backend	Node.js, Express.js, Python

Production Domains

- Travel tech: search, pricing, booking, checkout, high-traffic consumer flows.
- Product data platforms: catalogs, governance workflows, bulk actions, and analyst operations.
- Logistics systems: dashboards, shipment visibility, exceptions, and role-based workflows.

Education

- Bachelor of Engineering in Computer Science - Atharva College of Engineering, Mumbai
- Higher Secondary Education - Royal College of Arts & Science, Mumbai

Public Proof

- GitHub: github.com/AnkitParekh007
- Portfolio: ankitparekh007.github.io/resume/
- Current direction: angular-ai-copilot-starter, ngx-copilot-sdk, ai-ui-agent-demo, frontend-ai-patterns.
