SUMMARY

Frontend architect with 18+ years building enterprise web products, including a year on-site in Berlin. Most recently architected and led **SOP Co-Pilot**, an in-app AI agent for a product-content SaaS platform (20+ enterprise customers, ~10M SKUs). It plans multi-step UI actions, gets user approval before any data change, and records every run. Led a team of 7 and owned frontend architecture across multiple Angular products. Strongest where AI agents must act safely inside real enterprise workflows.

CORE SKILLS

- **AI / agents:** agent planning and tool execution, approval and risk gating, RAG with hybrid retrieval and embeddings, multi-provider LLM routing (OpenAI, Anthropic), streaming UX (SSE), eval harnesses, guardrails, MCP
- **Frontend:** Angular (12 to 21), TypeScript, RxJS, Angular Material, AG Grid Enterprise, Handsontable, service workers, i18n, React
- **Backend & data:** NestJS, Node.js, Express, Java, Python, PySpark
- **Delivery:** AWS, Docker, Kubernetes, Jenkins, Bitbucket Pipelines, multi-environment CDN releases
- **Leadership:** team of 7, architecture ownership across products, API design, code review, mentoring

EXPERIENCE

Frontend Architect (Contract), Bluemeteor (formerly Codifyd), remote for US company · Sep 2022 to Oct 2026

AI-powered product information and content platform (PIM/PXM/DAM) for manufacturers, distributors and retailers.

- Architected and led **SOP Co-Pilot** end to end (Angular client and NestJS service). It answers questions from on-screen context and docs with citations, and plans multi-step actions that run only after the user approves.
- Designed a **plan-first agent architecture**: a deterministic action catalog generated from the app, risk classes that separate reads from data changes, plan-once approval, re-plan on failure, and an audit ledger. Chosen over free-form tool calling so agents cannot invent steps on enterprise write paths.
- Built the service layer: JWT authorization, rate limits, SSE streaming, policy enforcement, a provider-routed LLM layer with tenant bring-your-own-key, hybrid retrieval, cost metrics and prompt sanitization.
- Created the **agent evaluation harness** (golden goals, gate pass/fail reports) and security/regression specs that gate releases. Shipped as an enterprise pilot with feature-flag gates in every environment.
- Led the **AI-assisted mapping and finalize-mapping** experience shared by the supplier and retailer apps. It replaced field-by-field manual mapping with AI suggestions, human review and confidence-based bulk accept.
- Removed a **multi-minute UI freeze**: screen-context reads were making ~551 lookup calls for a region showing at most 40 rows, and scoping reads to the visible region fixed it.
- Owned AG Grid Enterprise screens for submissions, submission details and digital assets, plus the release pipelines from playground to production with CDN deploys and automated release notes.

Senior Frontend Engineer, Forto GmbH, Berlin, Germany · Sep 2021 to Sep 2022

Digital freight forwarding / logistics platform.

- Relocated to Berlin to join the frontend team of a digital freight-forwarding platform.
- Built frontend features for logistics dashboards, shipment visibility, exception handling and role-based workflows.

Team Lead, Codifyd · 2018 to 2021

- Led a team of 7 developers and owned frontend architecture across multiple enterprise products: Amaze UI (retailer PIM), Supplier Portal and BridgeWeb.
- Set technical direction (stack choice, integration contracts, delivery trade-offs) and defined module boundaries for large multi-module Angular applications.
- Sustained production codebases through refactors, regression control and release coordination; partnered with DevOps on CI/CD.

Earlier experience · 2012 to 2018

- **Front-end Expert, Zooty.in** (2016 to 2018): UI architecture, component boundaries and state ownership for customer-facing products; performance and hardening of live systems.
- **Lead Front-end Programmer, Musafir.com** (2015 to 2016): high-traffic travel search, pricing, booking and checkout UI; performance under real traffic.
- **Senior Front-end Developer, Verdantis** (2014 to 2015): data-dense enterprise UIs with strict validation.
- Capgemini (freelance), Efurtherance, E10 InfoTech, Aambit Softwares (2012 to 2014).

OPEN-SOURCE & PUBLIC WORK

- **ngx-copilot-platform:** Angular copilot SDK with a Next.js RAG backend on Supabase pgvector
- **org-ai-force:** Angular 21 AI agent workspace with a NestJS orchestrator, RAG and MCP tools
- **agent-studio:** visual builder for AI agents with MCP tools and provider abstraction
- **Agentic-Engineering-Playbook:** open roadmap for production-grade agents, RAG and MCP tools

EDUCATION

B.E. Computer Science, Atharva College of Engineering, Mumbai, 2013
